

UNDERGRADUATE THESIS OUTLINE

FORM A

Dear Sir/Madam,
I, the undersigned :

Name : Marsia Br Pelawi
Student ID No. : 220502068
Study Program : S1 Manajemen Reguler
Major : Management
Research Title : Marketing Strategy of Nasi Gerilya Restaurant on the GrabFood Platform to Increase Sales Based on SWOT Analysis

Would like to submit an undergraduate thesis outline as follows:

Background	Nasi Gerilya is a local Padang food restaurant that uses GrabFood as one of its main digital sales channels. In online food delivery platforms, competition is not only based on taste, but also on price, menu variety, product photos, promotion, ratings, reviews, delivery experience, and store visibility. Although Nasi Gerilya has potential strengths such as popular menu items and customer recognition, the business also faces challenges such as unstable sales performance, customer complaints, menu availability issues, and competition from similar restaurants on GrabFood. Therefore, a systematic marketing strategy analysis is needed to identify the internal and external factors affecting Nasi Gerilya and to formulate suitable strategies using SWOT analysis supported by IFAS and EFAS.
Research Objectives	1. To analyze the current marketing strategy of Nasi Gerilya on the GrabFood platform. 2. To identify the internal factors, including strengths and weaknesses, that influence Nasi Gerilya's marketing performance. 3. To identify the external factors, including opportunities and threats, faced by Nasi Gerilya on GrabFood. 4. To formulate alternative marketing strategies for Nasi Gerilya based on SWOT, IFAS, and EFAS analysis.
Main Theory	The main theories used in this research include marketing theory, marketing strategy, STP, marketing mix, digital marketing, environmental analysis, and SWOT analysis. Marketing theory explains how a business creates and delivers value to customers. Marketing strategy explains how a business determines its target market and competitive position. The marketing mix helps analyze product, price, place, promotion,

	people, process, and physical evidence. Digital marketing theory is used to understand GrabFood as an online food delivery platform. SWOT analysis, supported by IFAS and EFAS, is used to identify strengths, weaknesses, opportunities, and threats before formulating SO, WO, ST, and WT strategies.
Identification of the Variables (if applicable)	This research is qualitative, so it does not use statistical independent and dependent variables. However, the main research focuses are: 1. Marketing strategy of Nasi Gerilya on GrabFood. 2. Internal factors: strengths and weaknesses. 3. External factors: opportunities and threats. 4. IFAS and EFAS scores. 5. Alternative marketing strategies based on the SWOT matrix.
Research Design	This study uses a descriptive qualitative research design. Data are collected through interviews, observation, documentation, customer reviews, and supporting literature. The data are analyzed by reducing relevant information, presenting findings descriptively, identifying internal and external factors, preparing IFAS and EFAS matrices, determining the strategic position of the business, and formulating alternative strategies through the SWOT matrix.
Research Hypothesis (if applicable)	This research does not formulate a statistical hypothesis because it uses a descriptive qualitative approach. The purpose of the study is not to test the relationship between variables, but to understand the marketing condition of Nasi Gerilya and formulate strategic recommendations. However, the research proposition is that SWOT analysis supported by IFAS and EFAS can help identify the most relevant marketing strategies for Nasi Gerilya on GrabFood.
Research Sampling	The sampling technique used in this research is purposive sampling. The informants are selected based on their relevance to the research topic. The sample may include the owner or manager of Nasi Gerilya, employees or admins involved in handling GrabFood orders, and customers who have purchased Nasi Gerilya through GrabFood. Additional data are obtained from GrabFood store observations, customer reviews, menu documentation, competitor comparison, and business performance documents.
